Hawk Uranium Signs Contract for Auger Drill Program on Holdsworth, Ontario Gold Project

Toronto, June 22, 2009 – Hawk Uranium Inc. (TSX-V:HUI, FRANKFURT:HPM) (“Hawk”) is pleased to announce that it has signed a contract with Aardvark Drilling Inc. of Guelph, Ontario to carry out a 2,000 meter auger drill program on the Black Sands Zone of the Holdsworth Gold Project. The purpose of the program is to quantify the gold/silver resource in the Black Sands surface zone as a follow up to the metallurgical testing recently completed at SGS/Lakefield Laboratories. Upon completion Hawk will be able to complete a resource estimate and commence to determine the technical feasibility and economic viability of the Black Sands Zone.

About the Holdsworth Claims:

The Holdsworth Property is host to gold and silver mineralization within three (3) distinct geological environments: (1) lode gold in traditional quartz veins - "The Soocana Vein" (2) an oxidized cap at surface developed over a massive pyrite zone (Algoma Iron Formation) - "The Black Sands" and (3) the precursor to the black sands - a massive pyrite zone (Algoma Iron Formation) at depths - "The Massive Sulphide". All three gold and silver prospects occur within Archean aged mafic to intermediate metavolcanic rocks of the Michipicoten Greenstone Belt.

Michael Newbury, P.Eng, a "qualified person" as such term is defined by National Instrument 43-101, and a director of Hawk, has reviewed the preliminary metallurgical results and has otherwise reviewed and approved the technical information in this news release on behalf of Hawk.

About Hawk Uranium Inc.:

Hawk Uranium Inc. is a Canadian based junior mining company with a portfolio of diversified exploration projects at various stages of exploration and drilling, for Gold in N. Ontario, Uranium in N. Saskatchewan, Ontario and Quebec, and Nickel/Copper/PGM in the 'Ring of Fire' McFauld's Lake Area of N. Ontario.
